

Company Details	
Company Name	Accenture Japan Ltd.
Category	MNC (Foreign Headquarters)
Sector	Industry and Enterprise, Song, Industry and Enterprise, Finance, Talent, Digital Core, Cybersecurity
Company Description	Accenture is a professional services company that helps leading global enterprises and public sector organizations achieve rapid value creation and continuous transformation by implementing digital technologies at the core of their businesses and maximizing the power of AI. We support our clients throughout every stage of their transformation journey, from strategy development and business transformation to technology implementation and operations. By working alongside our clients until transformation is successfully realized, we help turn vision into tangible outcomes. Accenture brings together the diverse capabilities required to drive all types of transformation. By combining the expertise of approximately 800,000 professionals worldwide, Accenture's proprietary assets, deep industry, business, and technology knowledge, and a strong ecosystem of partners, we deliver large-scale, high-impact solutions with measurable results.
Type of Business	Consulting services
Job Designation	Digital Consultant
Job Description	Digital Consultants help clients solve business challenges through technology and enable large-scale digital transformation initiatives. Working with organizations across various industries, digital consultants design, architect, and deliver technology-driven solutions that create measurable business value. As a Digital Consultant, you will: - Diagnose client business challenges and design enterprise architecture and digital solutions that deliver measurable outcomes - Lead the selection and design of cutting-edge technology solutions — Cloud, AI/Data Analytics, Industry X (Manufacturing Digitalization), IoT, XR, Customer Experience, and more — tailored to each client's strategic priorities - Translate complex technology possibilities into actionable business strategies, guiding clients from vision through to execution - Define what should be built — not just how to build it — leveraging AI and automation to enhance quality and accelerate delivery - Drive the full consulting lifecycle: problem diagnosis, solution design, implementation oversight, and value realization What sets Accenture apart: We are technology-agnostic, enabling us to always recommend the best solution for our clients — unconstrained by proprietary products. Our goal is not to "build for the sake of building," but to "transform and deliver results."
Career Path	You will start your career as an Analyst, developing both technology and consulting skills through hands-on project experience. As you gain experience, you can progress to Consultant and Manager and pursue a variety of career paths based on your interests, strengths, experience, and skills, including: Business × Technology Path: Leverage your engineering experience to expand into upstream areas such as requirements definition, IT planning and strategy, and solution design and proposals. Project Management Path: Develop your project management expertise and grow into a role that leads teams, large-scale projects, and programs. Technology Specialist Path: Deepen your expertise in specific technology areas and grow into roles such as a technology specialist or architect, leading projects from a technical perspective. Your career is not limited to a single path. As business demands evolve, you will have the opportunity to develop new skills and expand your areas of expertise — building a career that grows with both your strengths and the needs of your clients.
Location	Tokyo Office affiliation: Nationwide centered on the Tokyo metropolitan area * There is a possibility of business trips in Japan and overseas and future changes in the office to which you belong.
Education/ Experience	- Must graduate from an IIT college or graduate school (any undergraduate or graduate degree) by June 2027 and must be able to join by December 2027. - Bachelor's degree or higher required (any field of study, earned or expected) - Any full-time professional work experience after completing their bachelor's degree are not eligible to apply.
Skills Required	N/A
